

# Field Force Navigator™

## Turn-by-Turn Navigation for Windows Mobile Handheld Computers

**Field Force Navigator** is the first navigation solution developed specifically for enterprise users. In today's high-pressure world of rising fuel costs and decreasing worker productivity, taking control of your fleet's efficiency is more important than ever.

**Field Force Navigator** is a full-featured turn-by-turn navigation solution that provides "spoken" route guidance for every maneuver on the way to the driver's destination. It is simple to use and integrate with your core mobility solution. You can pass stop addresses from your program to **Field Force Navigator** and let it guide your drivers to the location, and then automatically return to your application.

And since it was designed for enterprise use, don't expect the usual "bloatware" found in consumer navigation software.

If you want to eliminate excess mileage costs, "lost" driver time and improve fleet productivity, you need **Field Force Navigator**.

### Features

- Dynamic Route Guidance: Provides spoken, turn-by-turn directions to any address nationwide.
- Automatic Route Recalculation: Directions are updated every second. If you miss a turn, you get new directions instantly.
- Voice Prompts: Voice instructions give you the exact distance to your next turn and the type of turn.
- Routing Options let you select between Quickest and Shortest.
- Step-by-step address entry by address or postcode.
- Route Highlighting highlights the road ahead clearly and visibly.
- Maneuver View option.
- Auto-Zoom progressively zooms in on the map as you approach the next turn.
- Reverse Geocoding to capture addresses or lat/lon.
- ETA/Distance to destination.
- Import custom Points Of Interests (POIs).
- Truck and trailer option available (bridge heights, road restrictions, hazmat etc...)

### Benefits

- Increases productivity and on-time performance
- Saves time and fuel costs
- Promotes increased safety because voice prompts keep the driver's eyes on the road
- Low investment because you use the same handheld used for route accounting, DSD or other applications
- Easy to learn and operate
- No activation or monthly fees
- No wireless airtime charges

### Integration & Installation

- Installation via CAB file.
- Small runtime footprint
- Simplified license management.
- API for integration with third party applications. Supports any .NET development environment including C#, Visual Basic, etc...
- Control Destination input, Map Display, Configurations, etc...

### Hardware Requirements

- Windows Mobile/Pocket PC device computer
- ActiveSync 4.x
- 1-2 GB storage card space recommended for maps
